BOWLING BALLS

Effective October 1, 2002

Listed below — to the right of the ball prices — is the hooking reaction of each ball. (No. 1 is for the least hook; No. 32 for the most hook). The hook potential is for when it is shiny and dull. This guide is to be used as a starting point. The balls will react differently depending on lane conditions, how one releases the ball, the ability of the bowler, and many other variables that come into play.
